

Chosen Scenario Name:

Shopping cart

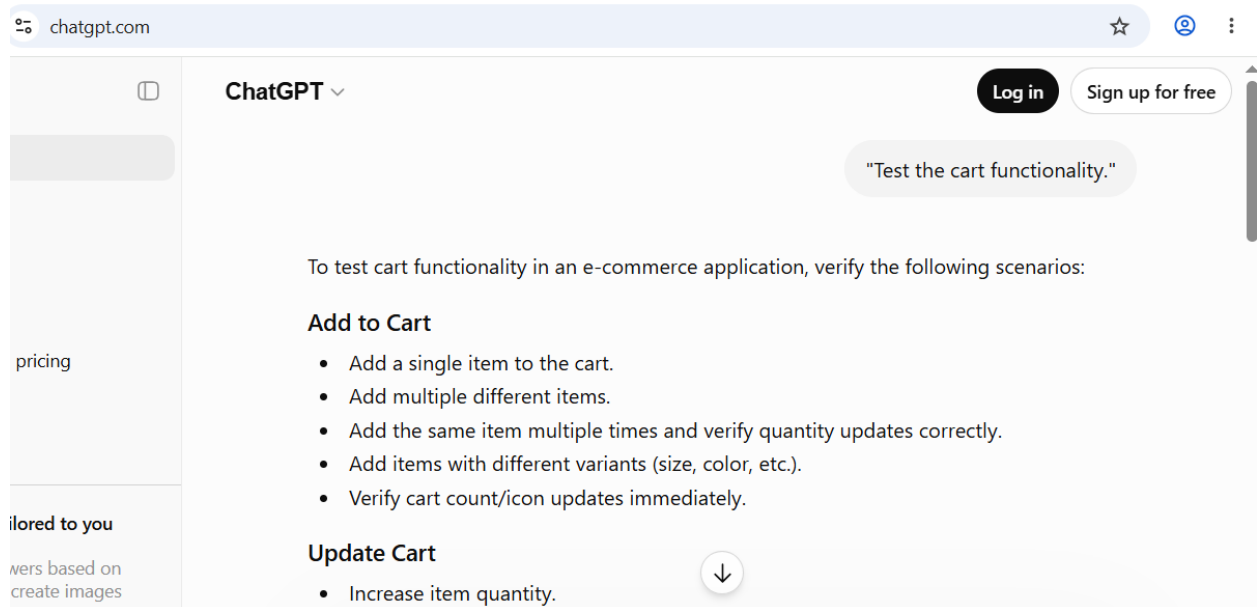

Weak prompt provided in the Question:

"Test the cart functionality."

What I feel is missing in the prompt:

- What application to search? [For Example: Whether this is for online retail application or a clothing store etc]
- Specific condition like applicable conditions [Like items worth more Rs 10000 to be covered and marked separately, Gender based sales]
- Duration/Range for testing the cart functionality.
- How in depth the cart testing has to be? [Meaning :Search coverage extent]
- What is the desired format for the cart testing functionality result outcome?
- Should there be a comparison included in cart testing feature?
- Should the cart functionality outcome need to be reviewed by any one before publishing?

Output from Weak prompt in ChatGpt:

To test cart functionality in an e-commerce application, verify the following scenarios:

Add to Cart

- Add a single item to the cart.

- Add multiple different items.
- Add the same item multiple times and verify quantity updates correctly.
- Add items with different variants (size, color, etc.).
- Verify cart count/icon updates immediately.

Update Cart

- Increase item quantity.
- Decrease item quantity.
- Update quantity to the maximum allowed value.
- Attempt to exceed available inventory.
- Verify subtotal and total recalculate correctly.

Remove Items

- Remove a single item.
- Remove all items.
- Verify totals update after removal.
- Verify cart becomes empty when the last item is removed.

Pricing & Discounts

- Confirm item prices match product pages.
- Verify subtotal calculation.
- Apply valid coupon codes.
- Test invalid/expired coupon codes.
- Verify tax, shipping, and discount calculations.

Persistence

- Refresh the page and verify cart contents remain.
- Log out and log back in (if applicable).
- Verify cart persistence across browser sessions/devices according to requirements.

Inventory Validation

- Add out-of-stock items.
- Attempt checkout when inventory changes.
- Verify stock limits are enforced.

Checkout Integration

- Proceed to checkout with items in the cart.
- Verify cart data transfers correctly.
- Return from checkout and confirm cart contents remain accurate.

Edge Cases

- Add very large quantities.
- Use special characters in coupon fields.
- Test slow network conditions.
- Test concurrent cart updates from multiple tabs.

Expected Results

- Cart contents remain accurate.
- Quantities and prices update correctly.
- Totals are calculated correctly.
- Inventory restrictions are enforced.
- No data is lost during refresh, login/logout, or checkout transitions.

A concise test case example:

Test Case	Steps	Expected Result
Add Item	Add Product A to cart	Product A appears in cart with quantity 1
Update Quantity	Change quantity from 1 to 3	Quantity updates to 3 and total recalculates
Remove Item	Remove Product A	Product A is removed and total updates
Apply Coupon	Enter valid coupon code	Discount is applied correctly
Refresh Page	Refresh browser	Cart contents remain intact

Structuring the Prompt using ICEPOT technique:

Instruction:

- [Mandatory] Cloth shopping cart should be able to add, delete, update return items accordingly from 2010 to 2025.
- [Mandatory] Include the clothing item sales for men, women and kids separately.
- [Strict] Do not show any code and include transaction sales in INR only including all coupon discounts.
- [Strict] Return items can be updated only in the cart within 10 days from the date of purchase considering no damage to clothes.
- [Mandatory] Include all positive test case and negative test case scenarios for testing the shopping cart functionality.
- [Mandatory] Shopping cart should save the data automatically incase of power shutdown and unplanned machine restart.
- [Mandatory] Shopping Cart should be able to compare the hand on head items comparison between any 2 consecutive years including discount price.
- [Strict] Shopping cart should allow the mode of payment to be chosen post product selection accordingly whether it is through internet banking, card or cash/ gpay /wallet.

- [Strict]Auto alert should be shown by shopping cart if any items in inventory are due to expire per the business inventory rule in the next one week based on the past customer purchase track record.
- [Mandatory]Cart should be able to move to payments section once all items are loaded.
- [Mandatory]Incase if there are corrections, user should be able to navigate back.
- [Mandatory]Include all boundary test case and negative test case scenarios for testing the shopping cart functionality for clothing store.
- [mandatory]Shopping cart product output has to be generated in a prescribed output format as mentioned below.

Context:

Act as a Quality Assurance Expert include all the test scenarios for shopping cart functionality testing for a clothing store.

Example:

Test Case id /Test Case Name/Pre-Requisites/Description/Steps/Expected Result/Suggestions

Persona:

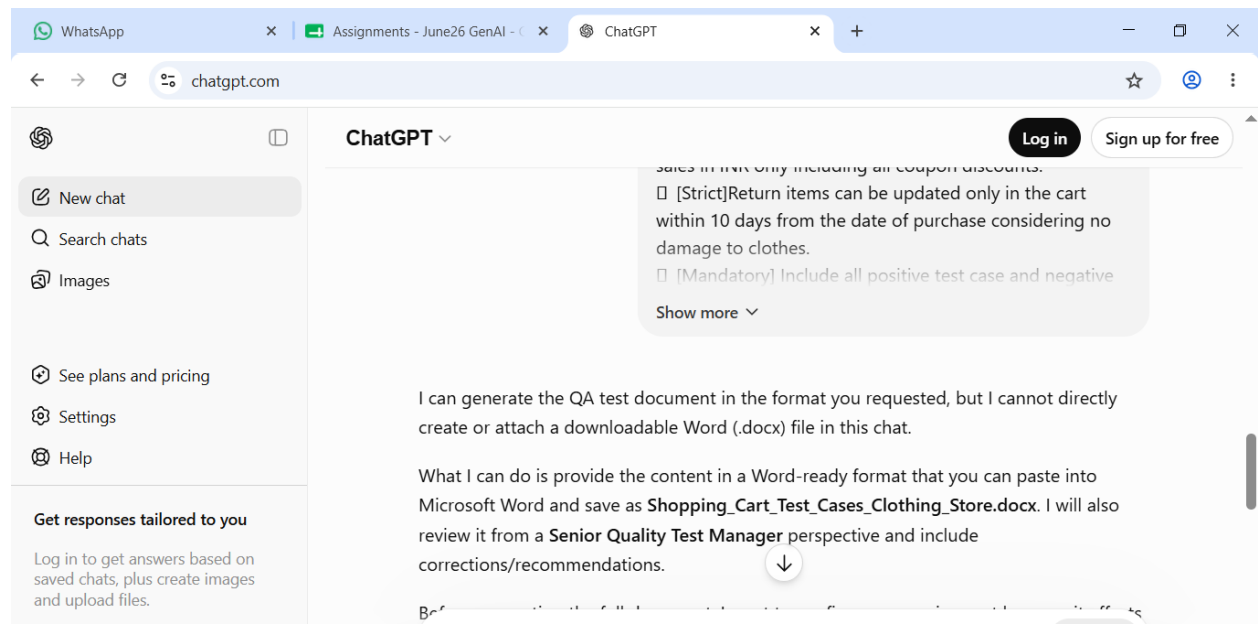

Review this as Senior Quality Test Manager and make the necessary corrections upon my approval.

Output File:

Downloadable word format

Tone: Professional and neat.

FUNCTIONAL TEST SCENARIOS

Test Case ID: CART_001

Test Case Name: Add Men Clothing Item to Cart

Pre-Requisites:

User logged in and inventory available.

Description:

Validate addition of men's clothing item.

Steps:

1. Open clothing store.
2. Select Men's category.
3. Choose product.
4. Click Add to Cart.

Expected Result:

Selected item added successfully.

Cart count updated correctly.

Transaction value displayed in INR.

Suggestions:

Verify inventory deduction.

Test Case ID: CART_002

Test Case Name: Add Women Clothing Item to Cart

Pre-Requisites:

Women inventory available.

Description:

Validate addition of women's clothing item.

Steps:

1. Select Women category.
2. Add item to cart.

Expected Result:

Item added successfully.

Price displayed in INR.

Suggestions:

Verify coupon applicability.

Test Case ID: CART_003

Test Case Name: Add Kids Clothing Item to Cart

Pre-Requisites:

Kids inventory available.

Description:

Validate addition of kids clothing item.

Steps:

1. Select Kids category.
2. Add item to cart.

Expected Result:

Item added successfully.

Cart updated accurately.

Suggestions:

Validate inventory update.

Test Case ID: CART_004

Test Case Name: Update Cart Quantity

Pre-Requisites:

Item already present in cart.

Description:

Validate quantity modification.

Steps:

1. Open cart.
2. Increase quantity.
3. Save changes.

Expected Result:

Quantity updated.

Discount and total recalculated.

Suggestions:

Verify tax and discount calculations.

Test Case ID: CART_005

Test Case Name: Delete Item from Cart

Pre-Requisites:

Cart contains items.

Description:

Validate item removal.

Steps:

1. Open cart.
2. Select Remove.

Expected Result:

Item removed successfully.

Total recalculated.

Suggestions:

Verify inventory restoration.

Test Case ID: CART_006

Test Case Name: Apply Coupon Discount

Pre-Requisites:

Valid coupon available.

Description:
Validate coupon application.

Steps:

1. Add item to cart.
2. Apply coupon.

Expected Result:
Coupon discount applied.
Final amount displayed in INR.

Suggestions:
Verify discount rules.

=====

RETURN MANAGEMENT TEST SCENARIOS

Test Case ID: RET_001
Test Case Name: Return Request Within 10 Days

Pre-Requisites:
Purchased item exists.
Purchase date within 10 days.

Description:
Validate return eligibility.

Steps:

1. Open order history.
2. Select return item.
3. Submit request.

Expected Result:
Return accepted.

Suggestions:
Verify return workflow.

Test Case ID: RET_002

Test Case Name: Update Return Request Within 10 Days

Pre-Requisites:

Return request already initiated.

Description:

Validate return modification.

Steps:

1. Open return request.
2. Modify details.
3. Save.

Expected Result:

Return updated successfully.

Suggestions:

Track audit history.

Test Case ID: RET_003

Test Case Name: Return Attempt After 10 Days

Pre-Requisites:

Purchase older than 10 days.

Description:

Validate return restriction.

Steps:

1. Submit return request.

Expected Result:

System rejects request.

Appropriate message displayed.

Suggestions:

Verify date calculation.

Test Case ID: RET_004
Test Case Name: Return Damaged Clothing

Pre-Requisites:
Damaged item reported.

Description:
Validate damage restriction.

Steps:

1. Submit return.
2. Mark damaged.

Expected Result:
Return rejected.

Suggestions:
Capture reason code.

=====

PAYMENT TEST SCENARIOS

Test Case ID: PAY_001
Test Case Name: Payment via Internet Banking

Pre-Requisites:
Cart contains products.

Description:
Validate Internet Banking payment.

Steps:

1. Complete cart.
2. Proceed to payment.
3. Select Internet Banking.

Expected Result:
Payment completed successfully.

Suggestions:
Verify transaction logs.

Test Case ID: PAY_002
Test Case Name: Payment via Card

Expected Result:
Card payment successful.
Order generated.

Test Case ID: PAY_003
Test Case Name: Payment via Cash

Expected Result:
Cash payment option accepted.

Test Case ID: PAY_004
Test Case Name: Payment via GPay

Expected Result:
GPay payment completed successfully.

Test Case ID: PAY_005
Test Case Name: Payment via Wallet

Expected Result:
Wallet payment processed successfully.

BOUNDARY TEST SCENARIOS

BND_001 Quantity = 1

Expected Result:
Accepted.

BND_002 Maximum Allowed Quantity

Expected Result:
Accepted.

BND_003 Quantity Above Maximum

Expected Result:
Rejected.

BND_004 Return Exactly 10th Day

Expected Result:
Return allowed.

BND_005 Return on 11th Day

Expected Result:
Return rejected.

BND_006 Inventory Expiry Exactly 7 Days Away

Expected Result:
Alert generated.

BND_007 Inventory Expiry 8 Days Away

Expected Result:
No alert generated.

BND_008 Year Comparison 2010 vs 2011

Expected Result:
Comparison generated.

BND_009 Year Comparison 2024 vs 2025

Expected Result:
Comparison generated.

BND_010 Maximum Cart Capacity

Expected Result:
System performs within SLA.

3 observations on what improved between Old prompt and new and why?

S.NO	Output Observations in Weak prompt-Old	Output Observations in ICEPOT prompt-New
1	Generic and irrelevant data for shopping cart testing retrieved by user due to no context and not providing required instructions	Exact relevant test cases for shopping cart functionality acquired by user through setting proper context and providing required information
2	Conditions like return item validations and payment INR are not included in weak prompt	Accurate and desired test case output including return item validations and payment modes /INR only included due to detailed prompt
3	Outcome is published without any review and not in desired format.	Outcome is reviewed and published in desired file format for clear usage purpose and test audit.
