Flow 3: Test case generator with 3 different modules- Registration, Admin, AHC-RAG RETRIEVAL PIPELINE2

The screenshot shows the Langflow interface with two components connected by a line. On the left is the **MistralAI Embeddings** component, which has a dropdown for **Model** set to `mistral-embed` and a field for **Mistral API Key**. It has an output port labeled **Embeddings**. On the right is the **MongoDB Atlas** component, which has fields for **MongoDB Atlas Cluster URI**, **MongoDB Atlas Combined Client Certificate**, **Database Name** (set to `db_testcases1`), **Collection Name** (set to `collection_500`), and **Index Name** (set to `Vector_search1`). It has an input port labeled **Search Query** and an output port labeled **Embedding**. The **Search Query** field contains the text "Give me the test cases for the 3 different modules-Registration, Admin, AHC". The **Embedding** output port is connected to the **Embeddings** output port of the MistralAI Embeddings component.

The screenshot shows the Langflow interface with a **Search Query** dialog box open. The dialog box has a title bar with a close button (X). Inside the dialog, there is a text input field containing the text "Give me the test cases for the 3 different modules-Registration, Admin, AHC". Below the input field, there is a label **Search Query** and a description "Enter a query to run a similarity search." At the bottom of the dialog, there are two buttons: **Cancel** and **Apply**. The background shows the Langflow interface with the **MongoDB Atlas** component and the **Search Results** section.

MongoDB Atlas Vector Store with search capabilities

Show	Field Name	Description	Value ↑
	Embedding		
	Number of Results	Number of results to return.	50 + -
	Index Field	The field to index.	embedding ⌕
	Filter Field	The field to filter the index.	Type something... ⌕
	Number of Dimensions	Embedding Context Length.	1024 + -
	Similarity	The method used to measure the similarity between vectors.	cosine ⌵
	Quantization	Quantization reduces memory costs converting 32-bit floats to 8-bit integers.	binary ⌵
